Keywords:

- 3D Printing
- 3D communication interface with the medical world
- Patient specific Implant
- Orthopaedic surgery
- Advanced 3D Planning

Activities:

3D-Side brings the latest 3D technology into the surgical world by integrating images transfer to design & manufacturing of patient specific implants, instruments or accessories.

In addition to its own portfolio of products, 3D-Side offers an open platform (software / interface / manufacturing) allowing medical companies to efficiently market custom-made medical devices.

Products, Solutions and Services:

Using 3D software, additive manufacturing technology and a strong knowledge in surgical field, 3D-Side plans complex surgery and provides the surgeon with patient-specific instruments or custom implants such as custom cranial implants and treatment of complex bone surgery.
